🔍 Enable 2-factor authentication ✕

This practice gives you an added layer of protection in case your password is compromised. If a hacker discovers your password, it will be useless without approval from the second factor authentication.

***🔒**

Login > ***✓ > ⌨️ > Logged In!

first authentication | second authentication | enter code | successful login

ℹ️ **Do not share your one-time-password (OTP) over call.**

🔍 Don't share confidential information on social media ✕

Don't post information that can be used to verify your identity or snaps of your driver's license, passport, or credit card to protect your account from hacking.

PHONE NUMBERS

FULL NAME ✋ BIRTH DATE

PASSWORD / PASSWORD HINTS 🚫 COMPANY INFORMATION

YOUR ADRESS LOCATION DATA

ℹ️ **Remember, there is no 'Delete' button on the Internet.**

🔍 Don't download pirated software ✕

Pirated software may sometimes come with malicious software (malware) and ransomware that that could damage your files and systems and render them unusable.

What could happen to you

| Have your credit card / banking info stolen | Have your identity stolen | Be locked out of your computer for ransom | Have your device used in ad fraud | Have the quality of your work compromised |

ℹ️ **Remember, pirated software is illegal for a reason.**
